## Air Options Salt Water Prepared Dryers

Copyright 2002 by Air-Options, Inc.

Air Options frequently gets requests for dryers that will operate with salt water as their coolant. This is not recommended for our standard dryers. However, we do offer a special salt water construction that makes Air Options dryers compatible with marine applications. To prepare a dryer for this duty, we replace the heat exchanger components with corrosion resistance materials. The trap and head assemblies remain carbon steel. The upper and lower exchanger welds use a corrosion resistance welding rod. All fittings and external tubing are replaced with corrosion resistant components and the units have no moving parts.

For further information concerning your marine application please feel free to call and talk to one of our applications engineers.
